

MANUAL QA — TEST FLOW

Femi9 Storefront & Admin

A step-by-step walkthrough of the whole product from two sides — **Aravind** the admin and **Tavia** the customer — so you can click through every feature, confirm it works, and log any bugs you find.

DOCUMENT	Manual test flow / QA script
APP	femi9-next (local) · <code>http://localhost:3000</code>
DATE	19 July 2026
MODE	Local dev — payments & OTP run in test/mock mode (see §1)
HOW TO USE	Follow the parts in order; tick each step; note bugs in §8

Legend: **ADMIN · ARAVIND** steps done in the Ops console · **CUSTOMER · TAVIA** steps done on the storefront · **DEV-MODE** intended test-mode behaviour, not a bug.

1 Setup — start here

Run the app

Start the server	In a terminal: <code>cd femi9-next</code> then <code>npm run dev</code> → open <code>http://localhost:3000</code>
Admin login	<code>/admin/login</code> · email <code>admin@femi9.in</code> · password <code>femi9admin</code>
Customer login	<code>/login</code> · enter any 10-digit mobile → the 6-digit OTP is shown on the page (dev mode)

Dev-mode behaviours (do NOT log these as bugs):

- **PAYMENT** No Razorpay keys are set, so checkout shows "Test mode — simulating payment" and the order becomes **paid** automatically. In production this opens the real Razorpay card/UPI window.
- **OTP** The login code is displayed on screen instead of being sent by SMS. In production it goes to the phone via MSG91.
- **REWARDS** Points can only be redeemed once the balance reaches a reward's cost (cheapest is 500 points).
- **IMAGES** Product images are local placeholders; admin upload saves to a local folder.

The cast

Aravind — the Admin

Runs the shop from the **Ops console** at `/admin`. Adds products, manages stock & orders, refunds, and sees every customer.

Tavia — the Customer

Shops on the storefront. Browses, buys, tracks her cycle, earns points, subscribes, and joins the community.

The most valuable test is the **connected story** (§5): Aravind adds a product → Tavia buys it → Aravind sees the order → both sides stay in sync.

2 ADMIN · ARAVIND Add a product (the reusable template)

This is where you create anything you sell. It works for unlimited future products — a pad sold by pack, or a panty sold by size — with a dynamic list of variants.

#	Where	Do this	Expected result	OK? / bug
1	<code>/admin/login</code>	Sign in with the admin credentials.	Lands on the Ops dashboard with revenue, orders, "where customers are", top products, low stock.	
2	Sidebar	Confirm the nav groups: Overview, Catalog (Products, Inventory), Sales (Orders, Subscriptions, Customers, Coupons), Growth (Affiliates, Partners), Content (Blog, Reviews, Community), Configure (Settings).	All links present and clickable.	
3	<code>/admin/products</code>	Click Products , then + Add product .	Opens the "New product" form.	
4	<code>/admin/products/new</code>	Fill Name = "Test Pad Aravind", leave Slug blank (auto), Type = Pad, Base price = 149, Status = Active , Meta = "6 pads · 280mm", a short description.	Fields accept input.	
5	Variants	Click + Add variant . Set Kind = Pack, Label = "6 pcs", Pack count = 6, Price = 149, Stock = 20. Add a second: "12 pcs", count 12, price 279, stock 15.	Two variant rows added; each editable; Remove works.	
6	Images	(Optional) paste an image path like <code>/assets/img/prod-290-large9.webp</code> , or try Upload image .	Image row appears / upload returns a URL.	
7	Save	Click Create product .	Redirects to the product list; "Test Pad Aravind" appears with 2 variants, total stock 35, status Active.	
8	Storefront	Open <code>/product/test-pad-aravind</code> (the slug) in a new tab.	The product page renders with both pack options and prices — live from the database .	

Also try: edit the product (change price/stock, archive it) and confirm the storefront reflects it. Archived products disappear from the shop but stay in the admin list.

3 CUSTOMER · TAVIA Shop, log in & place an order

Tavia's buying journey — from browsing to a paid order and confirmation.

#	Where	Do this	Expected result	OK? / bug
1	/	Browse the home page — hero, product grid, journal teasers.	Products load from the DB (including Aravind's new one).	
2	/product/p330dw	Open "330mm Double Wings". Choose a pack (3/6/9), toggle One-time vs Subscribe & save 15% , set quantity, click Add to bag .	Cart drawer opens showing the selected pack (e.g. "9 pcs"), price, and nav bag badge = 1.	
3	Cart drawer	Change the quantity with +/-; note "Add ₹X more for free shipping". Click Proceed to checkout .	Quantity updates live; goes to /checkout .	
4	/login (optional)	Before or during, sign in: go to /login , enter a 10-digit mobile (e.g. 9012311111), click Send code , read the on-screen code, enter it, Verify .	Signed in; redirected to /account . (Guest checkout also works without this.)	
5	/checkout	Fill Full name = "Tavia", phone, address, city. Review the order summary (subtotal + shipping + total). Click Place order .	Validation catches empty required fields. On submit: "Test mode — simulating payment", then redirect to the confirmation.	
6	/order/FM-000xx	Read the confirmation.	"Thank you, Tavia!", order number, line items, total, and a "Payment received" badge. The cart is now empty.	
7	Nav	Click the person icon.	Goes to /account (logged in) or /login (guest).	

Bug-hunt ideas: add a **different** product too (does the cart hold two lines?), refresh mid-checkout (cart should persist), try an invalid phone, place an order for Aravind's "Test Pad Aravind" and confirm it works end-to-end.

4 CUSTOMER · TAVIA Account, cycle tracker, subscription & community

Everything Tavia can do once she's shopping — this is the "professional customer dashboard" side.

#	Where	Do this	Expected result	OK? / bug
1	/account	View the account page (must be logged in).	Profile, Bloom points balance, "ways to earn", redeemable rewards, order history (her real orders), addresses, subscription card.	
2	/account	Check points: after a paid order, points should appear under "recent activity" (e.g. "Order FM-000xx + welcome bonus").	Points = order value + first-order bonus. Redeem shows "Keep earning" until ≥ 500.	
3	Rewards	If balance ≥ 500, click Redeem on a reward.	Points drop; a coupon code is issued and shown.	
4	/dashboard	Open the cycle dashboard. If new, you'll see "log your first period". Log a period start date + length; log a symptom.	After logging ~2 periods, a prediction appears — next period, cycle day, fertile/PMS windows, confidence — computed from the entries.	
5	/product/p330dw	Start a subscription: pick Subscribe & save , choose a cadence (every cycle / 4 weeks / 6 weeks), click subscribe. (Login required.)	A real subscription is created; success shown.	
6	/account	Back on Account, find the subscription card. Try Pause / Resume / Skip / Cancel .	Status updates and persists.	
7	/periods-wall	Write a community story (name or anonymous, product chip, rating, text) and submit.	"Your story is awaiting review" — it does NOT appear yet (needs admin approval — see §6).	
8	/product/p330dw	Scroll to reviews, write a review (name, rating, body), submit.	"Awaiting approval" — pending until Aravind moderates.	
9	/affiliate	Apply as a creator (name, handle, platform, followers, email).	"Application received — we'll review." (Aravind approves in §6 and a code is issued.)	
10	/partner	Apply to the reseller program (name, phone, city, situation, reason).	Success + "we'll contact you on WhatsApp". Lead lands in the admin CRM.	
11	/blog	Browse the journal; open a post.	Posts + categories load from the DB; post page has its own title.	

5 The connected story — Aravind sees & manages Tavia's order

This is the end-to-end proof that both sides share one backend. Do §2 and §3 first, then:

#	Where	Do this	Expected result	OK? / bug
1	/admin/orders A	Open Orders. Find Tavia's order.	Her order appears with order no, date, customer "Tavia" , city, items, total, status paid . Filter by status works.	
2	/admin/orders/[id] A	Open the order detail.	Full line items, shipping address, and a status control.	
3	/admin/customers A	Search for Tavia.	She's now a customer record — name, phone, location (city) , order count, total spent, points.	
4	/admin/inventory A	Check the stock of the variant Tavia bought.	Stock dropped by her quantity (decremented on the paid order).	
5	/admin/orders/[id] A	On a paid order, click Refund order and confirm.	Status → refunded ; the variant stock is restored ; Tavia's points for that order are reversed.	
6	/account T	As Tavia, refresh Account.	The refunded order + reversed points reflect on her side.	
7	/admin/subscriptions A	If Tavia subscribed (\$4.5), open Subscriptions.	Her subscription is listed — customer, product, cadence, next delivery, status.	

What to watch: the same order should show consistent totals on the confirmation page, in Account, and in Admin. Refund should never make stock negative or points wrong. A brand-new customer's first order should create the customer record automatically.

6 ADMIN · ARAVIND The rest of the Ops console

#	Where	Do this	Expected result	OK? / bug
1	/admin	Read the dashboard after Tavia's activity.	KPIs, revenue & forecast, product mix, "where customers are" (city bars), orders by status, low-stock — from real data.	
2	/admin/coupons	Create a coupon (code, flat/percent, value, min order, expiry).	Coupon saved and listed; usage count shown.	
3	/admin/settings	Change a setting — e.g. Free-shipping threshold or Subscription discount % — and Save.	Saved; the storefront reflects the new rule (no code deploy).	
4	/admin/reviews	Find Tavia's pending review; click Approve .	Status → approved; it now shows on the product page.	
5	/admin/community	Find Tavia's pending wall post; Approve it.	Approved; it now appears publicly on /periods-wall .	
6	/admin/affiliates	Find Tavia's affiliate application; click Approve .	A unique promo code is allocated; status approved. (She can then check her stats on /affiliate .)	
7	/admin/partners	Find Tavia's partner lead; move it new → contacted → onboarded; add a note.	Pipeline status + note persist.	
8	/admin/content/blog	Create a blog post (title, category, excerpt, body) and publish.	Post appears in the list and on /blog .	
9	Sign out	Use the sidebar footer Sign out ; then try /admin/orders directly.	Redirected to /admin/login — the console is protected.	

7 Full feature map — every screen

CUSTOMER · STOREFRONT

Route	What
/	Home / shop
/product/:slug	Product, variants, reviews, subscribe
/checkout	Shipping + place order + pay
/order/:no	Order confirmation (token-gated)
/login	Phone OTP / email link
/account	Profile, points, orders, subs, addresses
/dashboard	Cycle tracker + predictions
/periods-wall	Community stories
/affiliate	Creator program + stats
/partner	Reseller application
/blog , /blog/:slug	Journal

ADMIN · OPS CONSOLE

Route	What
/admin	Dashboard / analytics
/admin/products	Catalog (add/edit/archive)
/admin/products/new	Add product + variants
/admin/inventory	Stock per variant
/admin/orders	Orders + detail + refund
/admin/subscriptions	Subscriptions
/admin/customers	Customers + detail
/admin/coupons	Discount codes
/admin/affiliates	Approve creators + payouts
/admin/partners	Reseller lead CRM
/admin/content/blog	Blog CMS
/admin/reviews , /admin/community	Moderation
/admin/settings	Editable business rules

8 Bug log — write what you find

Note the step (e.g. "§3.5"), what you did, what you expected, and what actually happened. Mark severity.

#	Step	What happened (bug)	Expected	Severity
1				
2				
3				
4				
5				
6				
7				
8				
9				
10				

When you're done: send me the filled bug log (even just the step numbers + a line each) and I'll reproduce, fix, and re-verify each one. Remember the §1 dev-mode behaviours aren't bugs.
