

Femi9 — Complete Image & Asset Audit

Every image shipped from femi9-next/public, its intrinsic dimensions, file size, and the pages that render it.

622 TOTAL MEDIA FILES	616 IMAGES	6 VIDEOS	79.60 MB TOTAL ON DISK	124 SOURCE ASSETS	498 GENERATED / SEQUENCE
--------------------------	---------------	-------------	---------------------------	----------------------	-----------------------------

1 · INVENTORY BY FOLDER

FOLDER	FILES	IMG	VID	ON DISK	WHAT IT HOLDS
assets/figma-home	87	87	—	22.54 MB	Figma-exported site UI art — hero, about, why, tracker, testimonials, nav, footer
assets/img/blogs	11	11	—	26.86 MB	Editorial cover photography for the Journal (blog) posts
assets/img	12	12	—	1.43 MB	Product photography, brand logos, pad detail shots
assets/opt	318	318	—	9.88 MB	Build-generated WebP responsive ladders (scripts/build-images.mjs)
assets/pad-frames	180	180	—	8.23 MB	90-frame scroll sequence for the exploded view
uploads/testimonials	12	6	6	10.52 MB	Customer video testimonials + poster stills
uploads	2	2	—	134 KB	Admin-console product uploads (dev disk store)
TOTAL	622	616	6	79.60 MB	

2 · BY FORMAT

FORMAT	FILES	BYTES	SHARE
PNG	46	49.16 MB	61.8%
WEBP	415	13.31 MB	16.7%
MP4	6	10.21 MB	12.8%
JPEG	100	6.64 MB	8.3%
SVG	55	283 KB	0.3%

PNG is 62% of all bytes across just 46 files — every one of them has a smaller WebP ladder already built beside it in assets/opt.

3 · FRAME SEQUENCE & LADDERS

SET	FILES	DIMENSIONS	TOTAL	PER FILE
pad-frames · JPG	90	810 × 1440	5.13 MB	34 KB – 90 KB
pad-frames · WebP	90	810 × 1440	3.10 MB	14 KB – 66 KB
opt/ derivatives	318	160 – 3000 w	9.88 MB	32 KB avg

49 source images have a responsive ladder; widths run 160 / 240 / 360 / 480 / 640 / 900 / 1280 plus the intrinsic width.

4 · IMAGE PAYLOAD PER PAGE

ROUTE	PAGE	ASSETS	IMG	VID	SOURCE WEIGHT	+ WEBP LADDER

/order/[orderNo]	Order confirmation	4	4	—	153 KB	463 KB
/admin [layout]	Admin shell	2	2	—	26 KB	0.0 KB
/admin/login	Admin login	2	2	—	26 KB	0.0 KB
/periods-wall, /partner, /affiliate, /thara, /privacy	Periods Wall, Partner, Affiliate, Thara, Privacy	0	0	—	0 KB	0 KB

Weight = every distinct file reachable from that route, not the bytes one visitor downloads (the ladder means a phone pulls a 360 w WebP, not the source PNG). Those five routes draw their art as inline SVG, so they ship no bitmap at all.

SVG dimensions are the authored width/height, or the viewBox when the file scales — they are vector and resolution-independent. logo-mark.svg at 2544 × 888 is the full lockup; logo.png 212 × 74 is the raster fallback in app/layout.tsx.

Covers are stored as URLs on the Postgres Post.image column; src/data/blog.ts seeds these eleven paths. Posts without a cover fall back to BlogCover, a generated per-slug SVG (no file on disk). Rendered at 1120 px wide — **the five 2718 px PNGs are 2.4×** wider than they ever display and account for 19.69 MB of the 26.86 MB.

MP4 dimensions are read from the poster stills, not the container: the six clips are authored at 720 × 1280 vertical, CRF 30. In staging/production they are served from S3 + CloudFront; the copies under public/uploads are the local-dev store and are gittedored.

11 · FINDINGS

- 47 source images (8.67 MB) are not referenced anywhere in app/ or src/ — marked ◦ above. Heaviest: testimonials-imgFrame28/29/30/32.png (5.62 MB, superseded by the video rail), hero-imgImage19.png, and 290mm/330mm.jpeg (retired in a comment in ProductDetail.tsx). With their ladders (2.79 MB) that is **11.46 MB** to reclaim.
- The 180 pad-frames files (8.23 MB) ship but never render. public/pad-exploder.js is loaded by app/layout.tsx, but no <pad-exploder> element is mounted in any page or component — only the CSS hooks in immersive.css remain. Either mount the component or drop the sequence.
- Blog covers are the largest single payload: 26.86 MB across 11 PNGs. Re-exporting the five 2718 px covers at 1280 px cuts that by roughly 15.35 MB with no visible change — the ladder already caps what visitors download, so this is repo and image-build weight.
- PNG is 62% of all bytes from 46 files; 22 of them exceed 1 MB apiece (45.66 MB together). Each already has a WebP ladder beside it, so the source PNGs are build input only and need not ship in the container image.
- One reference points at a file that does not exist — /assets/testimonials/priya.mp4 in src/data/videoTestimonials.ts; the live clips sit under /uploads/testimonials/. Two stray dev uploads also linger: a 1 × 1 px test artefact and a 134 KB duplicate of a catalogue photo.
- Five routes ship no bitmap at all — Periods Wall, Partner, Affiliate, Thara and Privacy draw entirely in inline SVG.
